

PIN Verification System

A simple Java console application that verifies a user's PIN with a maximum of three attempts.

Features

- Hardcoded PIN ("1234")
- User input using the "Scanner" class
- Maximum of 3 attempts
- Displays remaining attempts after incorrect entries
- Grants access for the correct PIN
- Denies access after 3 failed attempts

How to Run

- `javac PinVerificationSystem.java`
- `java PinVerificationSystem`

Example

- Enter PIN: 1111
- Incorrect PIN. Attempts left: 2
- Enter PIN: 1234
- Access Granted

Technologies Used

- Java
- Scanner Class
- Loops
- Conditional Statements

Example of output

>>**Successful Authentication**

```
===PIN VERIFICATION SYSTEM===
Enter correct PIN: 23445
Access denied . Remain Attempts : 2

===PIN VERIFICATION SYSTEM===
Enter correct PIN: 1244
Access denied . Remain Attempts : 1

===PIN VERIFICATION SYSTEM===
Enter correct PIN: 1234
